CORBA Language Mapping Specifications

CORBA is independent of the programming language used to construct clients and implementations. In order to use the ORB, it is necessary for programmers to know how to access ORB functionality from their programming languages. CORBA Language Mapping specifications define the mapping of OMG IDL constructs to several programming languages.

Each CORBA Language Mapping specification is a stand-alone document that is formatted as a separate book. Each book includes a cover, table of contents, preface, and the chapters that comprise the specification. **Click on the Language Mapping of choice below.**
